

What is KAN™-7?

- ✓ KAN-7 is a amino acid complex containing chelated iron. KAN-7 is optimized for promoting root growth and vigor, resulting in better crop establishment.
- ✓ It can be used as a foliar spray
- ✓ KAN-7 aids in more uniform emergence.

Foliar Spray Rate Guidance			
Seed	Timings	Lower Rate:	Upper Rate:
Corn	In Furrow/Banded at planting V3-V5 (herbicide timing) VT (fungicide timing)	5.300	6.000
Cotton	In Furrow/Banded at planting Pinhead Square 14 Days after Pinhead Square (Flowering)	5.300	6.000
Peanuts	In Furrow at planting Pre-bloom 14-21 Days post bloom	4.500	6.000
Pecans	Pre bloom 30 days after pre bloom Nut hardening	6.000	6.000
Soybeans	In Furrow/Banded at planting V3-V4 R1	5.300	6.000

How is it unique?

- ✓ KAN-7 allows the plant to use its intelligence to harness the extra photosynthetic energy provided by KAN-7 to focus on stronger yield. It also helps to translocate the energy to the sink organs.
- ✓ KAN-7 provides nutrients for soil microbes.
- ✓ Multiple applications throughout growing season has multiple benefits
Flowering, fruit stock, brix, color, size
- ✓ KAN-7 is effective on all crops!

Data

Field Trials Showed:

- ✓ A 21% increase in Jumbo Murcotts.
- ✓ A 2.4 bu/acre increase for soybeans when applied at V3-V5 and a 1.8 bu/acre increase when applied at R1.
- ✓ A 4.2 bu/acre increase for corn when applied at V3-V5 and a 5.6 bu/acre increase when applied at VT.
- ✓ A 696.5 lb/acre increase on rice with 3 foliar applications
- ✓ A 402 lb/acre increase on cotton with 2 foliar applications
